

aquarium

Goldfish should be kept in an appropriate size aquarium, what this means is more than one gallon per fish inch for good water quality. Goldfish get their oxygen from the water's surface.

temperature

Water temperature should range from 64° to 72°F. Goldfish are more comfortable in water with lower temperatures. Do not keep goldfish in tropical aquariums. When introducing goldfish to their new home, it is best to float goldfish in unopened bag.

diet

Goldfish food may be flake or tablet. Feed no more than goldfish can eat in three minutes. Overfeeding can pollute the water.

shopping list

- appropriate sized aquarium
- goldfish food
- water conditioner
- gravel & decorations
- net
- thermometer
- book about goldfish

fun facts

average size

2 to 18 inches long, depending on variety

average life span

up to 10 years

misc. information

goldfish produce more waste than other fish

check water quality at least once a week

10-25% of the total volume of water should be changed every two to four weeks, or as needed
